

Film Synopsis

The Butler, an American film of 2013 directed by Lee Daniels, is a political biopic. The movie came out in August 16, 2013. The main roles are played by Forest Whitaker and Oprah Winfrey. The basis of the film is an article "A Butler Well Served by This Election" from the Washington Post which describes the butler Eugene Allen, who served in the White House under the eight different presidents. The film's director Lee Daniels wraps up his work in two lives - the one that takes place within the walls of the White House, with its internal cuisine and traditions among the staff, and the other taking place on the streets, where the black population is gradually trying to establish themselves in the American society. In the movie, there is a big amount of documentary chronicles, which once again show that the sentimental story of the protagonist is not limited to the director and intends to deliver a message through the film to the society.
